Short-term dinoflagellate bloom in a shrimp pond in Bahía de La Paz, Gulf of California

Ismael Gárate Lizárraga, David Javier López-Cortés, Jose Jesus Bustillos-Guzmán, Christine Johanna Band Schmidt & María Socorro Muñetón Gómez

From mid-August to mid-September 1998, a dinoflagellate bloom in a shrimp pond near La Paz, Baja California Sur, was studied. Daily samples were taken of phytoplankton, dissolved oxygen, nutrient concentrations, photosynthetic pigments and proteins. The bloom occurred at temperatures of 29.7 to 33.2

Palabras clave: photosynthetic pigments, Bahía de La Paz, Gulf of California, shrimp ponds, dinoflagellate blooms, excess nutrients, Proteins
